

Name _____

The Scientific Method

By Brandi Waters

What do you do when you have a question and don't know the answer? You might ask a parent or a teacher. You might look for the answer in a book or on the Internet. Sometimes you can't find an answer to your question. You might do an experiment and try to find the answer for yourself.

There are many questions that no one knows the answer to. A scientist's job is to find answers to those questions. Scientists use experiments to help them find the answers. They use the scientific method to help them design better experiments. The scientific method is made up of seven steps.

1. Make Observations. Look at the world around you. What interests you?
2. Ask Questions. What questions do you have about what you are looking at?
3. Form a Hypothesis. Choose one question that can be answered with a yes or a no. Make a guess about what you think the answer is.
4. Test Your Hypothesis. Design an experiment that will answer the question you are asking. Make sure it does not answer any other question.
5. Perform Experiments. Carry out your experiment. Record your results and any observations you make.
6. Gather Results. Look at all of your results together. What do they tell you?

The Scientific Method

Questions

1. Name two ways that you might find the answer to a question.

2. A scientist's job is to _____.
A. write books
B. wear goggles
C. answer questions
D. do math problems
3. The scientific method is made up of _____ steps.
A. seven
B. ten
C. twelve
D. five
4. Which of the following questions could be used to form a hypothesis?
A. How many different kinds of germs are on my hands?
B. Why is the sky blue?
C. Do cats sleep more than dogs?
D. all of the above

The scientific method helps to make sure that scientists find the correct answer to their questions. Scientists aren't the only ones who use the scientific method. Anyone can use it to answer a question or solve a problem.

7. Reach a Conclusion: Did your experiment prove your hypothesis or disprove it?
